Preferred hybrid shared districts and distinct hotels

Three proposed hotel identities, with two aft wings. Existing public destinations remain shared; upper affiliation regions follow complete historical allocations.

Representative D13 plan. Dashed outlines indicate proposed affiliation only, not walls, floor cuts or capacity.

Selected neighborhoods: 327 of 880 historical upper guest rectangles; geometry records, not assigned units or capacity.

Remaining accommodations are unaffiliated. Atrium floor ring and detailed supported routes are omitted.

F-P forward port

Upper homes use complete allocations and the port forward commons. Orchard market, Shared table, music and D12 quiet rooms remain shared destinations.

F-S forward starboard

Upper homes use complete allocations and starboard forward commons. Thread & shell, Orchard food hall, two cinemas and Stillroom remain public.

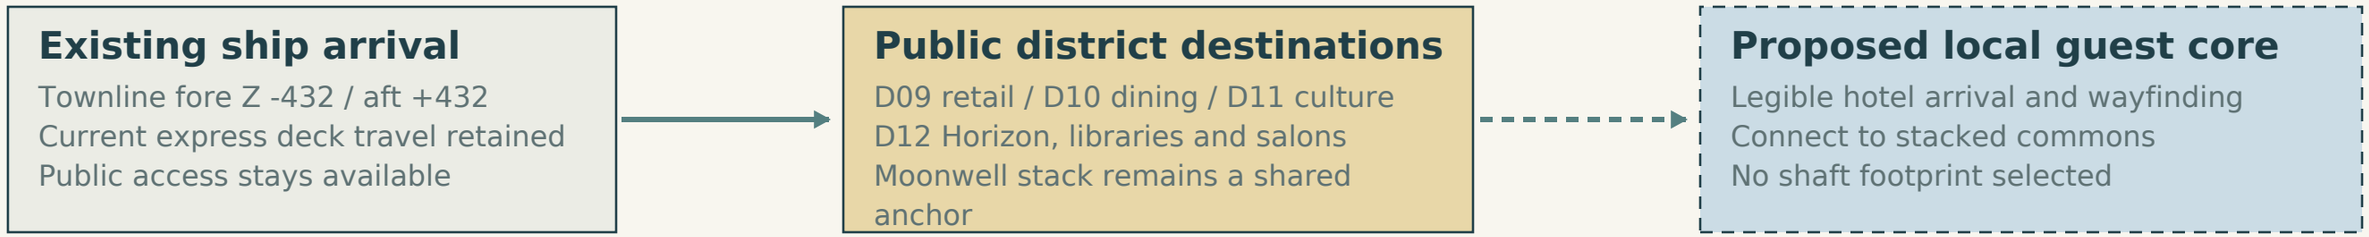

A-P / A-S one aft hotel

Two upper wings retain their complete aft commons. Many worlds gallery and Reading nooks remain public; the shared ship route connects the wings.

Preferred direction, pending review: hotel identity comes from its arrival, local service and residential character. It does not privatize every destination below its neighborhood.

Arrival and service relationships

Use retained commons as shared arrival places. Proposed local cores connect neighborhoods; their shafts, doors, capacity and structural fit remain unallocated.

Retained commons and upper home relationships

F-P **Port forward commons on D13-D17**
X -97..-63 / Z -384..-356
→ Quiet forward cluster
Whole allocations; exact unit affiliation and views unresolved

F-S **Starboard forward commons on D13-D17**
X +63..+97 / Z -384..-356
→ Forward social / family cluster
Whole allocations; exact unit affiliation and views unresolved

A-P **Port aft commons on D13-D17**
X -97..-63 / Z +356..+384
→ Aft court-facing homes
Whole allocations; exact unit affiliation and views unresolved

A-S **Starboard aft commons on D13-D17**
X +63..+97 / Z +356..+384
→ Aft court-facing homes
Whole allocations; exact unit affiliation and views unresolved

Separate staff route

D03 crew / D01 supplies -> existing service network -> proposed local service core -> floor support edge. Keep cart access, guest privacy and both public/service door mechanisms distinct. Exact landings and apertures remain unknown.

Relationship diagram only. Commons bounds are historical atlas allocations. Dashed links are proposed; they certify no walking or lift path.

Section strategy retain public layers and connect above

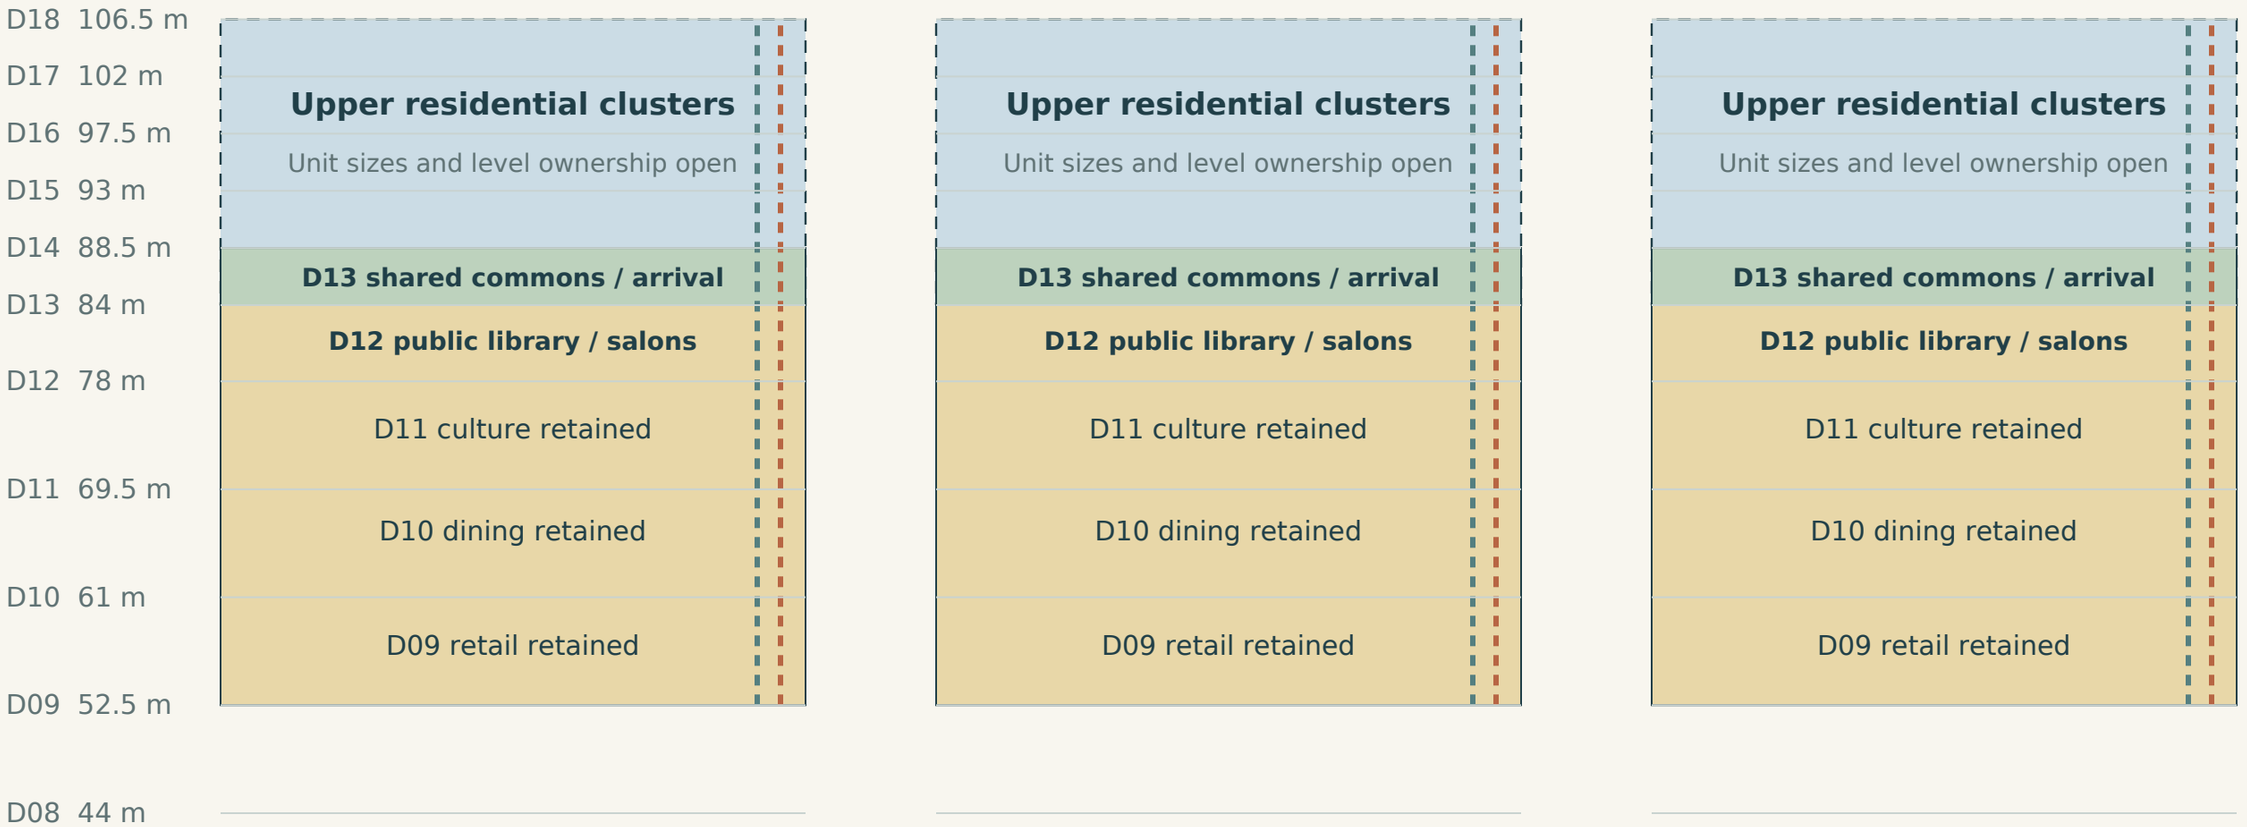

Hotel arrival and residential character grow around stacked commons. The public programs and their capacity remain in their existing historical allocations.

Forward port

Forward starboard

Aft paired wings

81 luxury units shipwide; exact locations and upper roof clearance remain unresolved.

Section is schematic across three neighborhoods; it does not project one continuous private hotel volume.

Dashed guest/service cores show connection intent only. Shafts and penetrations remain unlocated. Preserve theater openings D12-D14 and gallery interfaces D12/D13.

Multistory luxury units must reconcile occupied levels, clear heights and a single bookable identity. No second floor or expanded room adds a guest unit or establishes permitted passenger capacity.

Exact Y levels retained. Colored program layers describe ownership/use, not measured room-area availability or structural feasibility.

Before and after preserve the affected public program

The hybrid removes the assumption that a hotel outline owns its full vertical projection. All listed public footprints, IDs and recorded capacities are retained.

v1 intersection	Retained allocation / capacity	v2 disposition
A1 / A2 on D09	Orchard market; Thread & shell	Shared public retail base. No storefront or function removed.
A1 / A2 on D10	Shared table 240; Orchard food hall 240	Retain both complete venues and reservations; hotel identity grants no exclusive ownership.
A1 / A2 on D11	Music room; Cinemas 2 and 3, 200 each	Public culture remains continuous. Local hotel cores must find space without taking those envelopes.
A1 / B1 on D12	Horizon room; Listening salon	Retain public entries and quiet destination use beneath/alongside the forward port neighborhood.
A2 / B2 on D12	Stillroom; Long library	Retain public entries and library activity. Link by wayfinding to forward starboard arrival.
A3 / B3 / B4 on D12	Many worlds gallery; Reading nooks	Retain public programs serving both aft wings and the rest of the ship.
Forward commons D13-D17	Entire port and starboard forward commons	Use as shared arrival/court anchors. No boundary cuts or assumed privatization.
Guest footprint boundary cuts	Complete historical allocations retained	Remove clipped boundary fragments from the study. Affiliation remains provisional until IDs and actual contours return.
Aft commons outside v1 masks	Entire port and starboard aft commons	Include them as retained shared arrival anchors, without changing either physical allocation.

Disposition is a planning commitment to preserve these allocations. It does not prove a new core fits, that the final guest polygon is recovered, or that a hotel can accommodate its eventual unit mix.

Named allocations matched to atlas directories and source IDs. Full before/after records and exact bounds are in the editable disposition ledger.

Public vertical anchors and the remaining fit decisions

The preferred hybrid links to real destinations. Historical planar alignment is useful evidence; it is not permission for a new void, water route or floor opening.

Moonwell has a corroborated historical stack

All three allocations share X -54..-8 and Z -250..-182 in the atlas:

D10 Lantern restaurant
D10_banquet2 | 240 recorded places

D09 Paper Moon books
D09_books2 | retained public bookshop

D08 Mineral springs
D08_bath2 | retained aquatic destination

Keep these rooms and their public access. Connect the forward hotel neighborhoods to the shared stack through the existing ship network and proposed local arrival links. Internal Moonwell shafts, sculpted contours and openings remain unrecovered.

Vesper requires the missing change record

Vesper dining and D08 Gentle waters align at X +8..+54 / Z +182..+250. The old D09 Living gifts allocation lies between them. Preserve all three until the later two-level/waterfall revision is reconciled.

Hard evidence gates before physical layout

1. **Recover ID-to-room geometry**
   Actual room polygons, doors, beds, floor aliases and the accepted pre-loss changes.

2. **Reconcile 1,000 units and 81 luxury**
   Exact unit sizes, berths, tier IDs and multistory ownership; no capacity inferred from footprint counts.

3. **Fit the local circulation**
   Distinct guest/service shafts, landings, turning space, moving doors and supported paths.

4. **Verify the upper envelope**
   Local hull/roof profile, usable headroom and structural/service depth.

5. **Preserve useful existing programs**
   Any genuine change to a protected footprint, interface or capacity needs an explicit decision.

The D09 connected component kit can progress with adjustable interfaces while these ship-level checks remain open.

Moonwell/Vesper: atlas pp. 10-12 plus historical conversation. Name equivalence and later modifications remain explicitly subject to review.
